## FULLER-KINYON® PUMP 3-PIECE BEARING HOUSING EXCHANGE PROGRAM - “HOT SWAPS”

The “Hot Swap” is a fully-assembled FK Pump bearing housing for the 3-piece screw design. It comes installed with new seals, bushings, bearings, and is pre-lubricated.

Similar to Fuller’s compressor exchange program, the Hot Swap program exchanges worn 3-piece N pump bearing housing assemblies for new, warranted replacements. Ship your worn bearing assembly to one of our Service Centers. If an inspection reveals that its shaft, bearing housing, bearing support, and cover plate can be used again (many can be) for a future rebuild, there will be no upcharge for the good parts.

Quick delivery can also be made because large inventories of bearing housings maintained at Fuller’s Northampton plant and at our Certified Service Centers strategically located throughout the USA and Canada.

The cost of each hot swap is significantly less than buying the individual parts. The savings get even better when you factor in the reduced overall system downtime.

The cost of each hot swap is significantly less than buying the individual parts. The savings get even better when you factor in the reduced overall system downtime.

Maximize the benefits of the 3-piece screw in your Type N Fuller-Kinyon pumps by keeping Hot Swap bearing assemblies in your inventory. Having complete bearing assemblies readily available allows for immediate replacement and shortest possible downtime for your Fuller-Kinyon pump systems.
